8. Experiment: User Management & RBAC in Zoho Creator – Event Registration Form

Aim :

To configure User Management and Role-Based Access Control (RBAC) in the Event Registration Form application using Zoho Creator, secure registration data, restrict data visibility, and assign appropriate roles to administrators, event managers, and registrants.

Workflow:

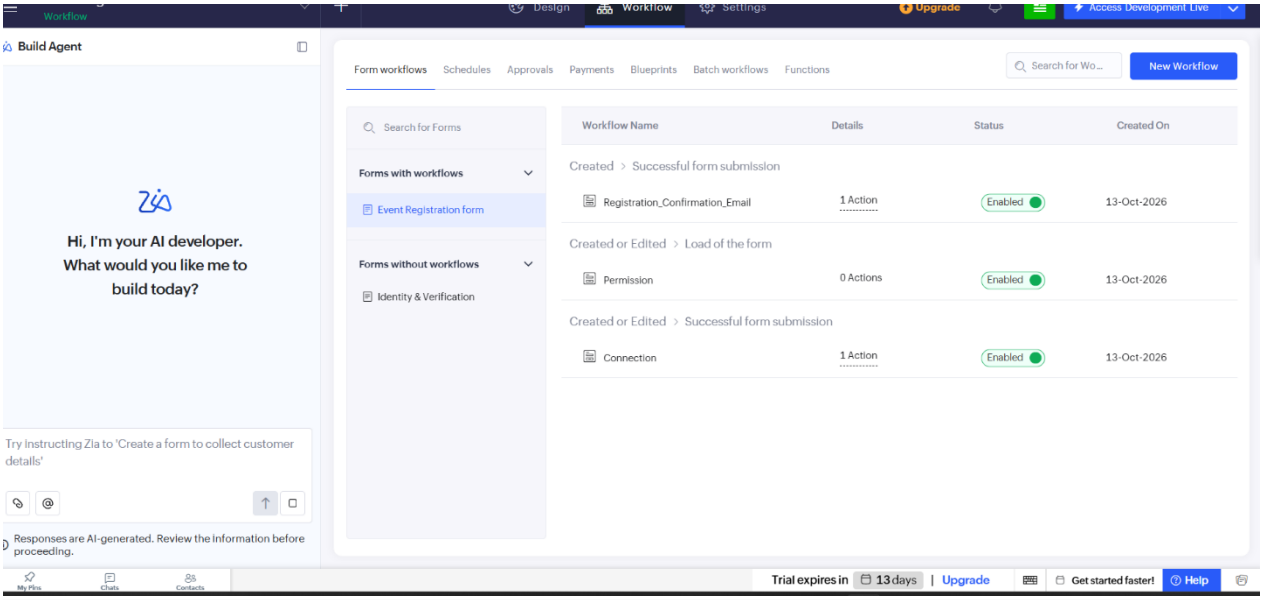

Role-Based Access Control (RBAC) restricts access according to each user's role. In the Event Registration Form application, three user tiers are used to manage event details and registration records securely.

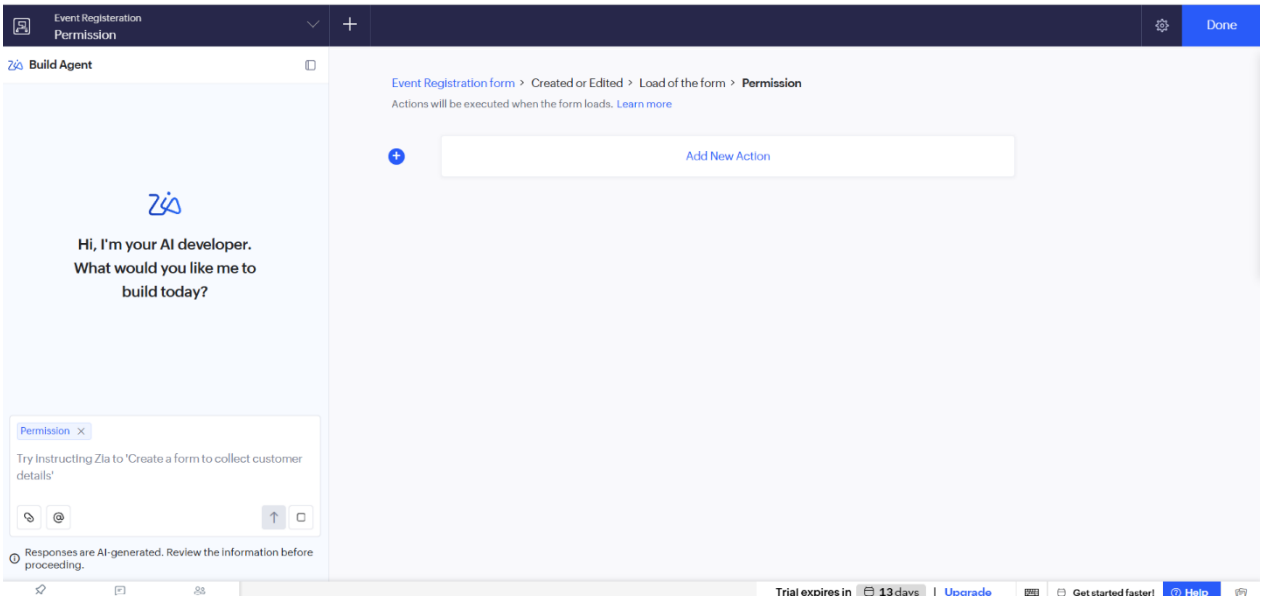

Role Name	Assigned Permissions	Data Access Scope
Administrator	Full Create, Read, Update, Delete (CRUD)	All event details and registration records
Event Manager	Read, Update, Approve Registrations	Event details and all assigned event registrations
Registrant	Create registration and Read own submission	Only their own registration records

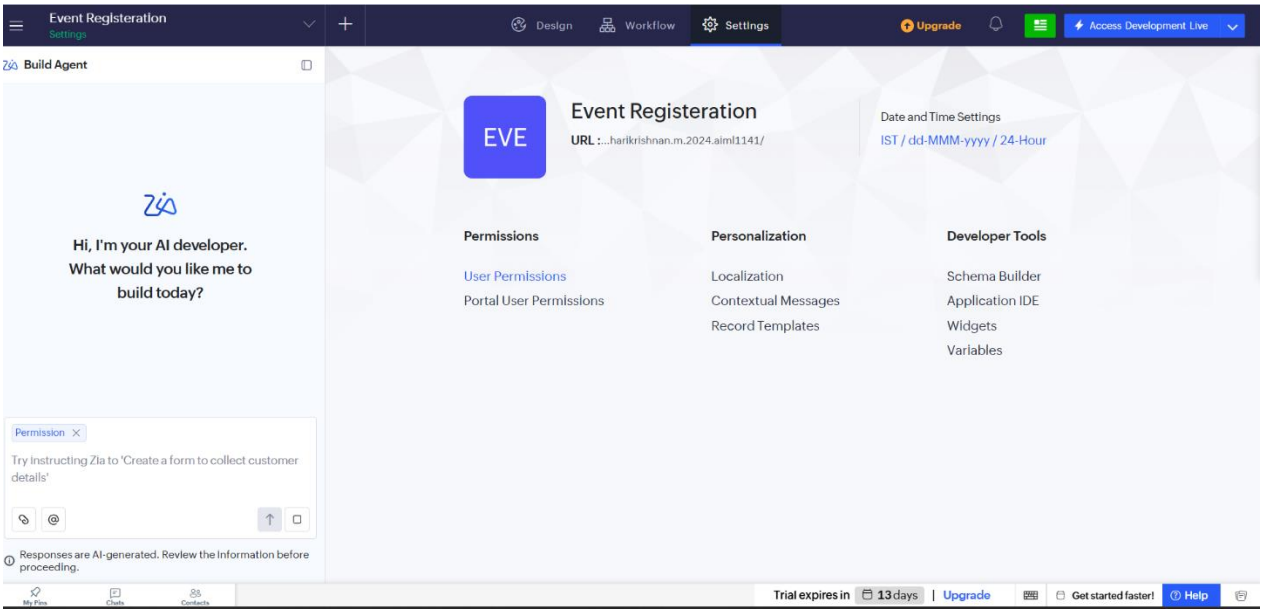

Procedure:

1. Access Developer Mode: Log in to Zoho Creator, open the Event Registration Form application, and navigate to Settings in the application builder.
2. Configure Users & Roles: Open Users & Permissions, select Roles, and configure Administrator, Event Manager, and Registrant roles. Set up a hierarchy if required.
3. Define Profiles & Permissions: Open Profiles and configure permissions for the Event Registration Form, registration reports, and event details. Restrict edit and delete rights so registrants can access only their own submissions while event managers can review and approve registrations.

Result:

User management and role-based access control for the Event Registration Form application were configured in Zoho Creator. The roles help protect event details and registration records by assigning permissions according to each user's responsibilities.
