11. Deploying Event Registration Form to Production

Aim:

To understand and execute the deployment lifecycle of the Event Registration Form application in Zoho Creator, moving forms, workflows, reports, and related components from the Development Environment to the Live Production Environment safely and efficiently.

Overview:

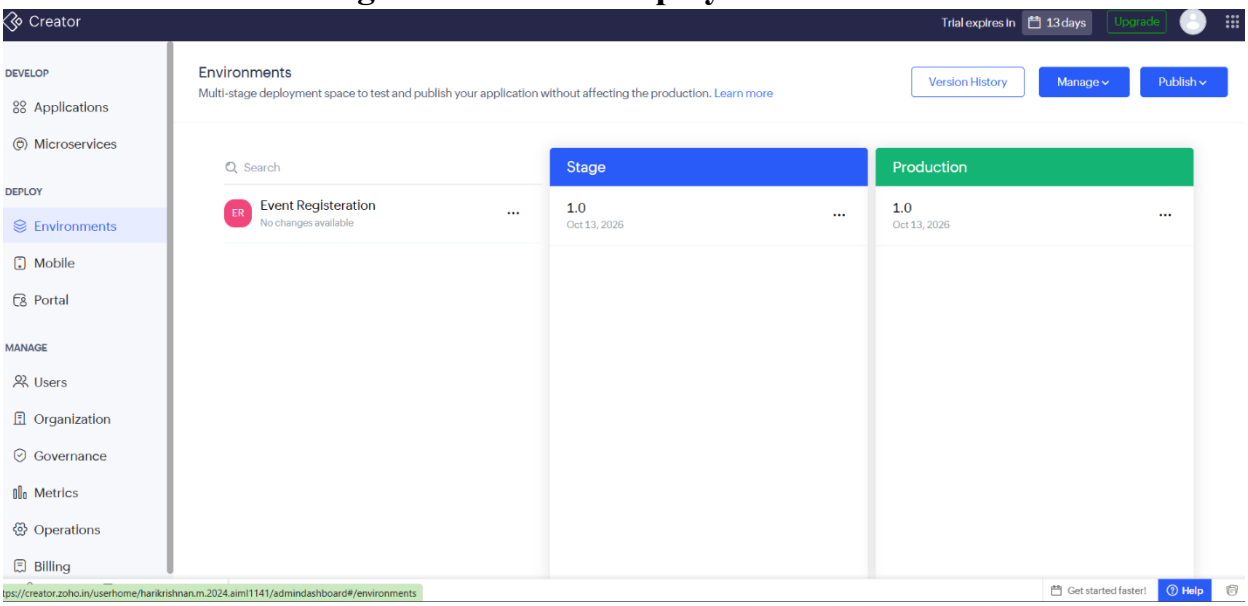

Zoho Creator provides separate environments for building and testing the Event Registration Form and for live event registration. Proper deployment helps protect participant data and ensures that registration forms, workflows, and reports work correctly after release.

Environment	Purpose & Operational Rules
Development (Sandbox)	Used to build the Event Registration Form, configure event and participant fields, write Deluge scripts, and test workflows without affecting live registrations.
Production (Live)	The live Event Registration Form used by participants to register for events; it stores active registration data and applies configured access controls.
Migration & Publish	The controlled process of publishing tested forms, fields, reports, and workflows from the development environment to production.

Procedure:

1. **Pre-Deployment Validation: Open the Event Registration Form in the Zoho Creator development workspace. Test the event registration form fields, required-field validation, confirmation workflows, participant reports, and any Deluge scripts before deployment.**
2. **Initiating Migration: Open the deployment manager or relevant settings in Zoho Creator and select the option to migrate or publish the tested Event Registration Form components to the production environment.**
3. **Reviewing Schema & Component Diffs: Inspect the comparison report for changes to event details, participant registration fields, confirmation workflows, reports, and script blocks. Confirm that the required changes are correct before publishing.**

Screenshots: Event Registration Form deployment

Result:

The Event Registration Form deployment experiment demonstrated the process of moving the application from development to production in Zoho Creator. Pre-deployment testing and component review help ensure that event details, participant registrations, workflows, and reports are ready for live use.
